

FairEntry Technology Tips

Internet Browsers

We recommend:

***Older versions of Internet Explorer may cause unexpected results**

Internet Connections

FairEntry does require an internet connection, however, the amount of data transfer is very minimal.

Ideas to use gaining Internet Connectivity for your fair:

***Modems with wired networks**

***Modems and routers with wireless networks**

***Hotspots**

***Aircards**

***Some fairs have reported local internet providers have agreed to donate a week of internet service to the fair**

Devices

FairEntry will work on ANY device that has an internet connection for Exhibitors and Staff, including:

***Personal Computers, Mac or PC**

***Laptops, Mac or PC**

***Tablets**

***Smartphones**

***Several of our current fairs have reported great success using Chromebooks during their fair due to their lower cost and ease of use.**

Barcode Scanners

FairEntry has an option for using Barcodes for quicker exhibitor or entry searches, check-in, and results. You can use any kind of Barcode Scanner that reads **Code 39**.

These come in options with cords to plug into your USB port or Bluetooth designs:

Did you know... FairEntry is not hosted in a "cloud". It is more reliable and more secure than both cloud technology and software-based programs. FairEntry is hosted on our secure server infrastructure that is owned and maintained by our team of technology experts. Because our infrastructure is built with full redundancy and true co-location, you will never have to worry about losing data or experiencing a loss of service during critical times of your fair. FairEntry is also PCI compliant. This means that the program meets or exceeds industry standards for credit card and data security.
