Horse

Tips:

- An average horse eats about 2% of its body weight in forage (hay) each day
- Feed only high quality, mold free hay and grain
- A horse needs its hooves trimmed about every 6-8 weeks
- A horse's teeth continue to grow throughout its lifetime and need to be filed every 1-2 years to remove painful points
- An average horse will drink 10-12 gallons of water each day
- Purchasing a horse is often the cheapest part of horse ownership. You should develop a budget to be sure you have adequate funding for this project.
- Provide clean, fresh water at all times
- Observe your horse's "normal" so you know when they are feeling unwell
